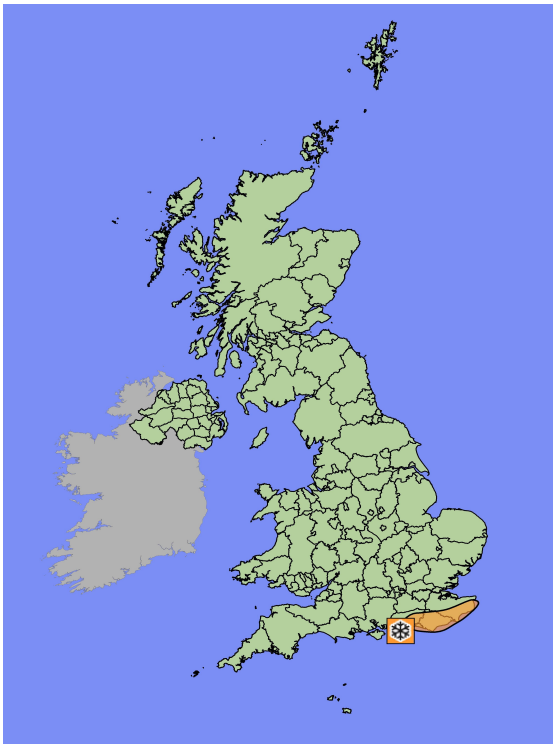
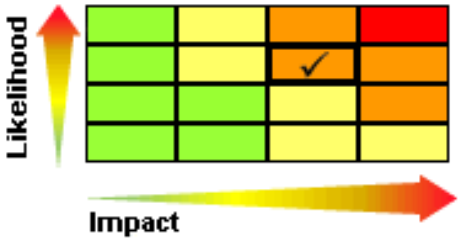
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone remains slow-moving in the English Channel. This will continue to produce snow overnight, merging with the snow showers streaming into southeast England from the North Sea. Now that road temperatures are more widely below freezing, the snow will settle more readily than was the case during the daytime. However, there is still some uncertainty over the northward extent of the more persistent snowfall and the public are advised to keep in touch with the forecast.

The Met Office have issued an **Amber Warning** of **Snow**

Valid from **20:30 on Mon, 11th Mar 2013** until **09:00 on Tue, 12th Mar 2013**

Snow is expected to continue through this evening and overnight. Up to 10cm may accumulate by Tuesday morning.

The public should be aware of the potential for significant disruption.
